Перед вами уникальное пособие по обучению школьников навыкам устного счёта. В нём объединены примеры и задания по всем темам курса математики для начальной школы.

Пособие содержит 16 разделов, каждый из которых посвящён отдельной теме. Раздел состоит из трёх частей:

— **Примеры для отработки навыков счёта на скорость.** На странице приведено 3—5 столбиков в среднем по 35 примеров. В конце столбика записывается время, потраченное учеником на решение. В левом нижнем углу обозначены контрольные цифры: идеальное время решения одного столбика, удовлетворительное и результат, который должен заставить ученика задуматься. Как показывает практика, ученик полностью усвоил тему, если решает пример и записывает ответ в течение 4—7 секунд. В этом случае считается, что навык счёта доведён до автоматизма.

— **Контрольные и проверочные работы.** С их помощью учитель быстро оценит полученные учениками навыки вычислений и выявит «слабые» места.

— **Логические примеры.** Выполнение этих заданий развивает логическое и математическое мышление, память и внимание. По усмотрению учителя примеры можно использовать как для олимпиадных работ и заданий повышенной сложности, так и для повторения и закрепления пройденной темы.

Пособие рекомендуется в качестве дополнительного материала на уроках математики, а также для занятий дома.
